

Snir Bachar

Systems software engineer focused on low-level tooling, hardware/software integration, and performance-sensitive infrastructure

Tel: 054-3024840 Email: Bachar.snir@gmail.com LinkedIn: [linkedin.com/in/snir-bachar-6409ba1a0](https://www.linkedin.com/in/snir-bachar-6409ba1a0) GitHub: [TDoGoodT](https://github.com/TDoGoodT) Tel Aviv, Israel

SUMMARY

Software engineer with experience across low-level systems, developer tooling, and hardware-facing software. Currently an individual contributor at Quantum Machines, building integration tools and code generation workflows close to hardware and system boundaries.

Hands-on with C/C++, Python, Kotlin, Linux, gRPC, CI/CD, and parallel computing. Experience spans system integration, hardware calibration, tooling automation, and performance-sensitive software that bridges hardware and software boundaries.

EXPERIENCE

Software Engineer — Quantum Machines

2022 – Today

Quantum Machines

Logic Group

- Individual contributor building integration tools and code generation frameworks for the Logic Design group.
- Designed Python/Jinja pipelines that automate low-level hardware configuration tasks.
- Bridged hardware design and software across the QM platform.

System Group

- Co-founded and led the Advanced Development team, prototyping the company's next-generation hardware platform.
- Built a full Python-based POC from scratch, close to system boundaries and hardware integration.

SW Group

- Contributed across the full Quantum Orchestration Platform stack — Python SDK, Kotlin/C++ server-side features over gRPC, and hardware calibration algorithms.
- Implemented the production system behind a granted US patent on clock synchronization and time transfer between quantum orchestration platform elements.

Software Engineer — FV Tools Design

2021 – 2022

Intel Corporation, Core Division

- Developed tools for formal verification engineers, improving debugging workflows and session throughput.
- Defined new workflows that reduced manual effort.
- Contributed to CI/CD pipeline maintenance.

Software Developer — Parallel Computing

2020 – 2021

Technion R&D Ltd, CGGC Group

- Optimized free-form geometric algorithms by identifying and parallelizing concurrent code paths using OpenMP on C++ OOP codebases.

QA & Automation Engineer

2019 – 2020

Barcode Ltd.

- Verified bug fixes on FDA-approved medical software and managed build, release, and installation cycles.

- Designed and implemented automated daily system routines using PyAutoGUI.

EDUCATION

BSc in Computer Science

Graduated 2023

Technion — Israel Institute of Technology

TECHNICAL SKILLS

Languages: Python, Kotlin, C/C++, Java, TCL, Jinja

Systems: Linux, gRPC, distributed systems, CI/CD

Tooling: SDK design, code generation, test automation

Integration: hardware calibration, performance-sensitive workflows, parallel computing

LANGUAGES

Hebrew — Native

English — Excellent

German — Elementary
